Museums and national identity: construction, changes and inclusions

Introduction

National history museums are understood as open institutions at the service of a changing society that conserves, investigates and communicates the tangible and intangible heritage of the communities of a territory for the purpose of strengthening the historical memory and the sense of national identity.

Inevitably, the management of the heritage is not neutral. The construction of a museographic discourse from a selection of contents and their presentation and the selection of certain heritage elements are proactive agents. In a changing society and a globalized world where identities are continuously being constructed, we need to think about the inclusive and transforming role museums should play at this time.

This seminar is intended to discover, analyse and debate those questions.

Programme

Morning

- 9.00 a 9.30 Reception and issue of documents
9.30 Welcome and introduction to the seminar
